CSNotes Documentations

1. Overview:

- ### Purpose:
  CSNotes is a platform that hosts blog posts and informative articles related to coding/computer science.

- ### Target Audience:
  The platform aims to provide a space for people interested in the tech world and would like to learn more about specific computer science related topics.

- ### Features:
  The user will be presented with a set of topics to choose from. Within that will be a series of articles specific to the chosen topic.

2. Navigation (local dev environment):

- ### Home page: http://localhost:3000/
  User can navigate home by going to the provided URL, or by clicking the home icon at the top left corner of every page.

- ### Single Post page: http://localhost:3000/posts/[...postslug]
  User can navigate to the post page by going to the provided URL (replacing "[...postslug]" with the slug of the desired post), or by clicking the post title/information on the home or topic page.

- ### Topic Page: http://localhost:3000/topics?topic=[...topic]
  User can navigate to the topic page by going to the provided URL (replacing "[...topic]" with the slug of the desired topic), or by clicking the topic title on the home underneath the header.

- ### Login/Admin Page: http://localhost:3000/login
  User can navigate to the login/admin pages by going to the provided URL. Upon successful signup/login, the user will be redirected to the admin page (http://localhost:3000/admin)

Important Note:
The admin page access is temporarily allowed to any logged in user for demo purposes only, after the demo is completed, admin access will be reinforced and only select users will be able to view the admin page and create new posts.
